Self-Guided ERP Implementations: Who They Work For and Who They Don't

Not every organization needs a full consultant-led ERP implementation. Some teams succeed with self-guided approaches when the right structure and support are in place. The key is understanding readiness and complexity.

LAUNCHPAD

launchpad.trunova.ai

When Self-Guided Implementations Work
- Internal teams are available and engaged
- Decision-makers are accessible
- Processes are relatively standard
- Guidance and structure exist

When Self-Guided Implementations Struggle
- Ownership is unclear
- Complexity is underestimated
- Data is uprepared
- Decisions are delayed

The Role of Structure
The difference between success and failure is often structure.
Teams need:
- Clear project plans
- Task sequencing
- Decision guidance
- Ongoing support

TruNova Launchpad bridges the gap between full consulting and unsupported self-implementation. It provides structure without forcing organizations into delivery models they do not need.

Self-guided ERP implementations can succeed with the right approach. The key is honest assessment and proper support.
