

# Utilizing Power BI with Business Central – Pro Training

## Course Description

This course is designed to help Business Central users confidently access, navigate, and consume Power BI reporting integrated with Microsoft Dynamics 365 Business Central. Rather than teaching Power BI report development, the focus is on empowering functional users to understand available Power BI content, interpret data correctly, navigate reports, drill into details, and use Power BI as a decision-support tool alongside Business Central.

Participants will learn how Power BI integrates with Business Central, how permissions and data models work at a high level, and how to use built-in Power BI apps, reports, metrics, and drill-through features effectively.

## Learning Objectives:

- Understand how Power BI integrates with Business Central and where data comes from.
- Access Power BI from within Business Central and from the Power BI service.
- Navigate Power BI reports, pages, filters, slicers, and drill-down paths.
- Interpret KPIs, visuals, and trends correctly to support business decisions.
- Use Power BI Metrics to track KPIs and monitor performance over time.
- Understand semantic models and how they can be used in Excel for analysis.
- Use Power BI back links to move from reports directly into Business Central records.
- Recognize security, licensing, and access considerations for Power BI with Business Central.
- Apply best practices for using Power BI as part of daily Business Central workflows.

## Additional Details:

**Format:** Virtual delivery with up to 5 users and a provided recording.

**Course Level:** Beginner

**Skills Prerequisites:** Basic familiarity with Business Central navigation and business processes. No Power BI development experience is required.
